WHITEPAPER SPEC

trad vc tools roadmap (v0.1)

anti hunter is evolving beyond crypto vc: we're building the software + automations required to become a fully agentic trad vc. if these tools are valuable, we may sell them to other vms / angels and turn ops into revenue.

pdf   html   md

PRINCIPLES

auditability: every output links back to sources (emails, notes, docs).

append-only truth: events are immutable; views are derived.

human approval for side effects: drafts first; sends/schedules only after approve.

build once, reuse: same ingestion + entity graph powers all tools.

ROADMAP FEATURES (V0.1)

1) lp update autopilot

turn portfolio updates + call notes into a monthly lp letter with citations per bullet.

inputs: gmail label `portfolio/update`, doc folder for notes, optional portfolio roster sheet.
output: google doc `lp update — yyyy–mm` + appendix of source links.
gate: every company mentioned must have ≥1 source link.

2) co-investor + prospect crm graph

relationship intelligence: who's warm, who leads, who writes checks, who owes a follow-up.

inputs: email + calendar participants, optional csv imports.
output: "today list", "round map", per-person timeline.

gate: no new entity without provenance pointer.

3) founder pipeline triage + follow-up automation

inbox → meetings → deterministic next steps. nothing falls through cracks.

inputs: gmail labels `founder/inbound`, `intro`, `follow-up`.
output: triage queue + sla reminders + weekly summary.
gate: untriaged threads cannot exceed 24h.

4) portfolio ask router

extract asks, match to connectors, draft intros, and track closure.

inputs: portfolio updates + ad-hoc asks.
output: "open asks" board + intro drafts + wins log.
gate: every ask has owner + status; escalation at 7/14 days.

5) investment memo autoprep

generate a standard diligence pack from messy sources; tag unverified claims.

inputs: deck/data room, emails, notes, links.
output: memo doc + diligence checklist + assumption registry.
gate: every key claim has a citation or `unverified` tag.
